■ **REFLOW SOLDERING CONDITION**

1. Thermal condition system such as infrared radiation (IR) or hot blast should be used, vapor phase (VPS) is not recommended.
2. The maximum cycle of reflow soldering is two times. The second cycle must be done after sufficient cooling time for more than one hour to return the temperatures of circuit boards and componenets back to room temperature
3. For lead-free type reflow soldering, please observe proper conditions below:

Preheat : 150°C to 180°C within 120 seconds
